July 10, 1989

Dear Mr. Stuckey

Please refer to your letter dated July 3, 1989 when reviewing our response.

1. The lab drum, rain accumulation drum, and the sparge water drum each have HAZARDOUS WASTE labels on them. The stripped perchloroethylene is sent to HRI Tulsa for sale because they have a better market for it than we do. We could sell it as is to industrial users in this area, but a better market exists for it out of Tulsa.

2. These drums have been removed and processed accordingly.

3. The drums specifically mentioned here are not in a "storage" area, they were in a temporary unloading and sampling area. They were removed in due course the same day to their respective storage areas. Better care will be used to separate such drums in the unloading area after lab analysis has indicated the need for separation.

(2) Also, thank you for allowing our facility to place drums directly on the cement pad without need for pallets.

If there are any questions please contact me.

Sincerely

*Chuck Trombold*
